PROFESSIONAL SUMMARY

SDE-2 with **3+ years** designing and building scalable distributed systems in fintech. Led large-scale monolith-to-microservices migration, improving API latency by **60%** and system throughput by **40%**. Deep expertise in **system design**, event-driven architecture, and high-throughput backend engineering. Practical AI/ML exposure with deployed production prototypes using LLMs and RAG.

TECHNICAL SKILLS

Languages & Frontend:	TypeScript, JavaScript, React.js, Next.js, Redux, TailwindCSS
Backend & APIs:	Node.js, Express, Fastify, gRPC, GraphQL, REST APIs
Data & Streaming:	MongoDB, Redis, Apache Kafka, Data Modeling, Indexing, Query Optimization
DevOps & Cloud:	Docker, AWS (EC2, S3), CI/CD, GitHub Actions, Nginx, Linux
Core Concepts:	System Design, Distributed Systems, Scalability, Fault Tolerance, Event-driven Architecture

WORK EXPERIENCE

Neokred Technologies

Dec 2023 – Present

Software Development Engineer – II (Full Stack | Distributed Systems | Fintech)

Bangalore, India

- Architected migration from monolithic MERN stack to **microservices** using Kafka, gRPC, and Redis, enabling horizontal scaling and service isolation across teams
- Designed **event-driven transaction processing pipelines** for high-throughput financial data, improving system throughput by **40%**
- Reduced **API latency by 60%** via Redis caching, optimised query patterns, and efficient inter-service communication
- Built **callback retry mechanism** for payment systems (Equitas & Shivalik) with exponential backoff (5 / 10 / 15 min); auto-enables manual retry only after all automated attempts are exhausted
- Executed **zero-downtime migration of 10M+ records** using Apache NiFi with data validation and rollback strategies
- Integrated **10+ banking & payment providers** ensuring reliability, idempotency, and fault tolerance; defined API contracts and system design standards across squads
- Mentored engineers, led code reviews, and drove architectural decision-making for the platform

Neokred Technologies

Dec 2022 – Dec 2023

Software Development Engineer – I

Bangalore, India

- Developed full-stack fintech features end-to-end using **React, Node.js, and MongoDB**; built scalable REST APIs for transaction ingestion, processing, and reporting
- Optimised MongoDB queries and indexing strategies for high-volume datasets; built responsive dashboards for merchants and internal operations

PROJECTS

AI Finance Dashboard | *Node.js · React · Kafka · MongoDB · Redis · AWS · Groq LLaMA 3.3 · GraphQL* · github.com/snoorbasha50/Ai-Finance-dashboard
Docker

- Built AI-powered finance platform that parses bank statement PDFs using **Groq LLaMA 3.3 70B** for automated transaction categorisation; delivers live updates via Socket.io
- Designed event-driven microservices with **Apache Kafka**; made Kafka optionally replaceable via env flag — same architectural pattern used in production migration from self-hosted Kafka to managed services
- Implemented **RAG with BM25 keyword retrieval** for contextual AI chat over personal transaction history — zero embedding cost, sub-second retrieval
- Deployed on **AWS EC2** + Nginx + Redis + MongoDB Atlas; multi-stage Docker builds cut image size by **40%**; automated CI/CD via **GitHub Actions** SSH deployment

Crypto Volatility Predictor | *Python · Scikit-learn · Streamlit · VADER · Pandas · CoinGecko* · github.com/snoorbasha50/Crypto_Volatility_Predictor_API

- ML pipeline predicting next-day volatility for BTC, ETH, SOL, XRP & BNB combining **OHLCV technical indicators** (RSI, MA, returns) with **VADER news sentiment** analysis
- Per-coin **RandomForestClassifier** with GridSearchCV tuning; deployed interactive **Streamlit** dashboard with live price charts and model confidence scores

EDUCATION

Sri Krishnadevaraya University — *B.Sc (Mathematics, Electronics, Computer Science)* · CGPA: 8.0 / 10

2019 – 2022

ACHIEVEMENTS

- Promoted **SDE-1** → **SDE-2** in recognition of leadership in system architecture and high-impact platform delivery
- Employee of the Month** — recognised for significant contributions to core distributed platform engineering
- Solved **100+ DSA problems** on LeetCode; solid foundation in algorithms and data structures
